

Job Title: Data Scientist (NLP Focus)

Company: InsightForge AI

Location: Berlin, Germany (Hybrid)

About Us

InsightForge AI builds advanced natural language processing systems for enterprise clients, including chatbots, document analysis, and knowledge extraction pipelines.

Role Overview

We are looking for a Data Scientist with a strong background in NLP and deep learning to develop and deploy language models for real-world applications.

Responsibilities

- Design and implement NLP models (classification, NER, summarization)
- Fine-tune transformer-based models (BERT, GPT, etc.)
- Work with large-scale text datasets
- Perform statistical analysis and hypothesis testing
- Deploy ML models using scalable infrastructure
- Collaborate with data engineers and product teams

Requirements

- Master's degree or higher in Computer Science, Data Science, or related field
- Strong Python skills
- Experience with NLP frameworks (Hugging Face, spaCy, NLTK)
- Deep understanding of machine learning and deep learning

Experience with PyTorch or TensorFlow

Strong statistics and probability knowledge

Experience with SQL and big data tools (Spark, Hadoop)

Nice to Have

Experience with MLOps pipelines

Knowledge of Docker and Kubernetes

Publications in AI/NLP

Experience with cloud platforms (AWS/GCP)

Benefits

Competitive salary

Hybrid work environment

Research-driven culture

Access to large-scale datasets and compute resources
