

Job Title: Junior Machine Learning Engineer

Company: DataNova Technologies

Location: Remote (Europe)

About Us

DataNova Technologies is a fast-growing AI startup focused on building intelligent data-driven solutions for businesses across healthcare, finance, and e-commerce.

Role Overview

We are looking for a motivated Junior Machine Learning Engineer to join our team. You will work closely with data scientists and backend engineers to design, develop, and deploy machine learning models into production systems.

Responsibilities

- Assist in building, training, and evaluating machine learning models
- Work with large datasets: cleaning, preprocessing, and feature engineering
- Collaborate with backend engineers to integrate ML models into APIs
- Monitor model performance and retrain models when necessary
- Conduct experiments and document findings
- Stay up to date with latest ML research and tools

Requirements

- Bachelor's degree in Computer Science, Artificial Intelligence, or related field

Strong knowledge of Python

Familiarity with machine learning libraries (e.g., scikit-learn, TensorFlow, PyTorch)

Basic understanding of statistics and probability

Experience with data manipulation tools (Pandas, NumPy)

Knowledge of REST APIs and backend integration

Version control experience (Git)

Nice to Have

Experience with cloud platforms (AWS, GCP, or Azure)

Familiarity with Docker and containerization

Experience deploying ML models in production

Knowledge of SQL and NoSQL databases

Benefits

Flexible working hours

Remote-friendly environment

Learning and development budget

Opportunity to work on impactful AI products
